### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:
  - a. Examiner withdraws 35 USC 112 1<sup>st</sup> paragraph rejection seen in previous office action dated June 10, 2010. That rejection was based on a lack of enablement because applicant failed to teach one having the ordinary skill in the art how to make the protective sheet (now claimed in claims 1, 26, and 27). The protective sheet has been claimed solely by its physical properties and there has been no disclosure on a process for making the inventive sheet. Applicant has argued that applicant's disclosure of a specific example (GHX-527) is enough to remedy the enablement issue. Applicant goes onto argue that only the elongation at break, transmittance and the storage modulus are required by the claims and that one having the ordinary skill in the art would not find it especially difficult to locate such a sheet with these properties. Examiner submits that the question of whether one having the ordinary skill in the art would be able to locate the claimed protective sheet is paramount to the enablement issue. Taking into consideration applicant's vehement arguments that one having the ordinary skill in the art would be able to select such a film, Examiner withdraws the enablement rejection. Applicant's disclosure sheds light on whether one having the ordinary skill in the art would be able to locate the claimed protective sheet. Specifically, Applicant's disclosure states the following: (1) **that the protective sheets for inventive use are CONVENTIONAL (See page 17 line 9 of applicant's specification dated January 25, 2006)** and (2) **the protective**

**sheet for inventive use is preferably selected from well known group of films such as polyethylene and polypropylene (See page 16 lines 10-14 of applicant's specification dated January 25, 2006).** Taking the disclosure with applicant's arguments, examiner withdraws the enablement rejection because the claimed protective sheet is conventional and made from a class of materials that are well known and easily procurable.

b. With respect to the rejections under 35 USC 103, the prior art of record does not expressly teach wherein the protective sheet is applied to the coating after step (I) and before the thermoplastic sheet is preformed. In addition, the prior art of record does not expressly teach fully curing the film (b2) after step (I) but before step (2) nor the use of a protective sheet having the claimed properties. Koniger the closest art of record while teaching the use of a protective sheet does not expressly teach the use of said sheet during a preform operation in order to ensure a functional surface during the molding operation. Applicant has argued that the use of the inventive protective sheet during various stages of the cure cycle and molding operation as well as the layering will impart unexpected properties onto the end product.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
